DETAILED ACTION

Allowable Subject Matter

Claims 1-56 are allowed.

Claims 1-56 are allowable over the prior art of record, none of the prior art whether together singularly or in combination to teach the claimed combination as recited. The closest reference No. 4,068,160 or reference No. 7,065,449 does not disclose or suggest the improvement of the instant application comprises receiving the elevation slope, magnetic and gravity data sets and applying the gravity and magnetic data sets to the elevation slope data set as matrices in a transfer function to link the elevation slope data set and output an oil/mineral deposit prediction value indicative of the likely presence of oil or mineral deposits as in independent claims 1 and 28.

The reason for allowance of claims 14 and 41 is the inclusion of receiving the elevation slope, magnetic and gravity data sets and establishing vector representations indicative of gradients for the elevation slope, magnetic and gravity data sets and applying a transfer function to the vector representations to link the elevation slope data set and output an oil/mineral deposit prediction value indicative of the likely presence of oil and mineral deposits.

The reason for allowance of claim 55 is the inclusion of receiving the elevation slope, magnetic and gravity data sets and applying the gravity and magnetic data sets to the elevation slope data set in a transfer function to link the elevation slope data set and output an oil/mineral deposit prediction value indicative of the likely presence of oil or mineral deposits <u>as an assigned probability</u> value based on the transfer function.

Application/Control Number: 10/828,584

Art Unit: 2863

The reason for allowance of claim 56 is the inclusion of receiving the Digital Terrain Elevation Data (DTED), magnetic and gravity data sets and applying the gravity and magnetic data sets to the DTED in a transfer function to link the elevation slope data set and output an oil/mineral deposit prediction value indicative of the likely presence of oil or mineral deposits.

Instead reference No. '160 teaches correlating a set consisting of filtered magnetic field intensities with a set consisting of filtered gravitational field intensities to detect subsurface mineral exhibiting relatively high density and relatively low magnetic susceptibility through utilization of gravitational field intensity and surface elevation information.

Reference No. '449 teaches gradient full-tensor gravity gradient data in response to variations in density of the rocks and minerals.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Toan M. Le whose telephone number is (571) 272-2276. The examiner can normally be reached on Monday through Friday from 9:00 A.M. to 5:30 P.M..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Barlow can be reached on (571) 272-2269. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
